PROJECTS

#1

Title: Text manipulation Web Tool

Technologies used: HTML, Bootstrap, Java Script and django(backend)

Project Summary: This is a text manipulation website where one can change their text from lower to upper case, can remove special characters from text, remove punctuations and extra new lines and counter total characters.

#2

Title: Echo - The Virtual Assistant

Role: Python Developer

Project Summary: This application takes voice command from user and translate into string and automate the task like a virtual assistant same as google Assistant do. This app is developed in Python using its modules and libraries.

#3 (Currently Working)

Project Name: My E-cart (ecommerce website and blog)

Technologies used: HTML, Bootstrap, Java Script, JQuery and django(backend)

Project Summary: I am trying to make a ecommerce website which will be like noon.com. The reason behind this project is that I just want to learn how newer technologies are being used and learning concept behind backend.
